

hydrophobic agent water-based

- ✓ Water-repellent and durable
- ✓ Developed to make walls moisture-proof, dirt-repellent and insulated
- ✓ Resistant to both alkalis and acids and unaffected by solar UV radiation

EFFECTIVE, SIMPLE AND EASY TO USE

1

The substrate must be free of contamination and defects that will adversely affect successful hydrophobing.

2

Ambient temperatures during application should be at least 7°C, up to max. 25°C.

3

Protect non-treatable materials with a suitable protective coating.

4

Wear liquid-tight gloves and safety glasses.

5

Apply the product in a flowing coat (not spraying) in a horizontal motion, working from top to bottom.

6

Protect the treated facade from rain for at least 5 hours. Wind and direct sunlight can also adversely affect the penetration depth.
